Project

Upon acquisition of a group of five dental practices known as the Midland Smile Centres, Rapleys were instructed to undertake a scheme of repairs, refurbishment and rebrand across the practices.

What we did

Having completed a scoping visit with key client stakeholders, Rapleys prepared a schedule of works and managed a competitive tender process with a selection of our approved dental contractors.

Following contractor appointment Rapleys acted as Contract Administrator, Project Manager and Principal Designer to coordinate and deliver projects across four of the sites with a combined project value of circa £300,000.

What we achieved

With the benefit of our dental and clinical compliance experience we managed the refurbishment of several surgeries and decontamination rooms. This involved coordinating specialist builders works and equipment suppliers.

Rapleys delivered the project without affecting the continuity of the business, thus involving a combination of working within a ‘live’ environment and ‘out of hours’ working. This required a high level of coordination with the practice managers and regular site inspections which ensured health and safety procedures, as well as a high level of site appreciation, was observed throughout the project.
